I am a Software Engineer with approximately 4 years of experience, working with C#, .NET, JavaScript, AWS, and Azure in high-responsibility systems in the financial and banking sector with AI. I developed features and integrations for onboarding, payments, identity validation, and anti-money laundering (AML) processes, contributing to the automation and reliability of critical business processes.

EXPERIENCE

Act Digital

Remote

Software Engineer - Back End

MAY 2025 - PRESENT

- Implemented resilience mechanisms using the Polly library to handle failures and ensure greater reliability in system process execution.
- Developed the integration with the Advice Compliance (KN1) API to automate sending and adding users to an anti-money laundering (AML) system.
- Worked on production deployment processes, participating in deployments, preparation and monitoring of change requests, and CAB presentations.
- Developed the mapping and integration of TypeScript/NestJS routines for GraphQL endpoints, ensuring communication between the application layers.
- Implemented an installment calculation routine for the payment checkout, allowing users to create payment plans for their purchases.
- Developed a Proof of Concept (PoC) for integrating and implementing the PayPal SDK and its APIs in a checkout system.
- Configured, prepared, and made UAT environments available for application testing and validation.

AI/R - Invillia and Avenue Code

Remote

Software Engineer - Back End

AUG 2024 - MAY 2025

- Migrated legacy projects and implemented hexagonal architecture, restructuring application architecture.
- Performed corrective and evolutionary maintenance on Xamarin mobile applications, fixing issues and improving existing features.
- Developed back-end APIs in .NET and C# for distributed systems based on microservices architecture.
- Worked with the infrastructure migration squad on adopting and implementing Google Cloud Platform (GCP) services, contributing to the modernization of .NET applications.

ATAK Sistemas

Remote

Full-stack Software Engineer

JAN 2023 - AUG 2024

- Developed solutions following Domain-Driven Design (DDD) principles, applying domain modeling and application architecture organization concepts.
- Developed and helped design desktop interfaces in Windows Forms (WinForms), integrated with servers, scales, and other devices and systems used in operations.
- Led the development of a new Billing project, implementing its main features and defining best practices, patterns, and guidelines for the solution.
- Led application architecture improvements, including implementing a Query Runner and a script interpreter for calculation execution.
- Performed code reviews and worked in CI/CD flow stages, contributing to the quality, standardization, and continuous evolution of the project.

Thiago Arcoverde

EDUCATION

Unicesumar - Maringa Campus

Maringa, Brazil

Software Engineering

JAN 2021 - DEC 2024

- Software Engineering, Data Structures, Databases, Cloud Computing, Design Patterns, Usability Engineering, Agile Methods, Cybersecurity, Software Development, Software Architecture, Distributed Systems, Requirements Engineering, Software Quality, Software Testing, and DevOps.

SKILLS

Languages:	C#, JavaScript, TypeScript
Frameworks:	.NET Core, .NET Framework, NodeJS, Nest, React
Databases:	MySQL, PostgreSQL, SQLite, SQL Server, MongoDB, Oracle
Cloud & Infra:	AWS, Microsoft Azure, GitHub Actions
Testing:	xUnit, Jest, Mock, NUnit
Languages:	Fluent English, fluent Spanish, basic French
